* = tests required

Sheeting service:

If requested, we may sheet the above rolls according to your requirements.

Colour profiles:

Tests with preset standard profiles gave good results. These are to be tested and, if required adapted, by the user.

Resistance to abrasion:

In general yes, depending on the colour saturation set. The higher the saturation percentage, the higher the risk of bleeding.

Coating / Cellophane lamination:

Not recommended, as this changes the optics and haptics of the product. However, generally possible; requires tests by the user.

All details given are recommendations only and without any guarantee. Please consider the manual of the printing machine supplier and their specifications regarding the use and suitability of printable cloths.
